### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: This application teaches a pretreating agent for electroless plating comprising a noble metal soap of naphthenic acid or a fatty acid having 5 to 25 carbon atoms and further comprising a silane coupling agent having a functional group with metal capturing ability in the molecule. The closest prior art of record is WO 01/49898 (US 7,045,461 is the English equivalent) and WO 01/081652 (US 6,780,467 is the English equivalent) in view of Yamamoto et al. (US 6,440,576). Both WO references teach a pretreatment agent composition for electroless plating comprising mixing a precious metal compound such as palladium chloride with a silane-coupling agent whose functional groups are capable of capturing metals. Yamamoto et al. teach a method for plating a polyimide film comprising contacting the polyimide film with a pretreating agent comprising a palladium compound such as palladium chloride or carboxylic acid salts of palladium wherein the carboxylic acid contains 6 to 30 carbon atoms and then electroless plating the polyimide film. Therefore, it was the examiner's position that it would have been obvious to one having ordinary skill in the art to have replaced the palladium chloride of the WO references with the carboxylic acid salts of palladium wherein the carboxylic acid contains 6 to 30 carbon atoms of Yamamoto et al. because the substitution of art recognized equivalents as shown by Yamamoto et al. would have been within the level of ordinary skill in the art, however, applicants have provided evidence in the specification that the pretreatment agent comprising a combination of a noble metal soap of naphthenic acid or a fatty acid having 5 to 25 carbon atoms and a silane

Art Unit: 1793

coupling agent having a functional group with metal capturing ability in the molecule of the instant claims provides a superior adhesiveness and no precipitation problems (see examples 2 and 4-6) as compared to a pretreatment agent containing palladium chloride alone or a pretreating agent containing palladium acetate (i.e. soap of carboxylic acid having 2 carbon atoms) and a silane coupling agent having a functional group with metal capturing ability in the molecule (see comparative examples 1 and 2). Accordingly, applicants showing of unobviousness and unexpected results have overcome the all obviousness double patenting rejections and the 103(a) rejection over WO 01/49898 or WO 01/081652 in view of Yamamoto et al. and the application is allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
